

Silicon Carbide

Silicon carbide is a ceramic compound formed by the combination of silicon (Si) and carbon (C) elements. Its chemical formula is SiC. Due to its high temperature resistance, mechanical strength, chemical resistance, and electrical properties, silicon carbide is widely used in various industrial applications. It is a ceramic that can withstand high temperatures and thermal shocks, and exhibits high resistance to wear and corrosion. Because of these properties, it finds applications in industrial furnaces, reactors, cutting tools, abrasive materials, armor plates, and high-temperature electronic devices.

Applications

- Sandblasting
- Grinding – Metal preparation
- Refractory
- Sandpaper – Cloth and Polishing

Available Sizes

| Fepa Standards | Micron (µm) |
|----------------|-------------|
| F008 | 2000 - 2800 |
| F010 | 1700 - 2360 |
| F012 | 1400 - 2000 |
| F014 | 1180 - 1700 |
| F016 | 1000 - 1400 |
| F020 | 850 - 1180 |
| F022 | 710 - 1000 |
| F024 | 600 - 850 |
| F030 | 500 - 710 |
| F036 | 425 - 600 |
| F040 | 355 - 500 |
| F046 | 300 - 425 |
| F054 | 250 - 355 |
| F060 | 212 - 300 |
| F070 | 180 - 250 |
| F080 | 150 - 212 |
| F090 | 125 - 180 |
| F100 | 106 - 150 |
| F120 | 90 - 125 |
| F150 | 63 - 106 |
| F180 | 63 - 90 |
| F220 | 53 - 75 |

Chemical Analysis

| Compound | Percent (%) |
|--------------------------------|-------------|
| SIC | 99 |
| Fe ₂ O ₃ | 0,20 |
| C-frei | 0,50 |
| Magnetfraktion | 0,12 |

Physical Properties

| | |
|-----------------|-------------------------------|
| Sertlik | 9 – 10 Mohs |
| Şekil | Angular |
| Erime Noktası | ~ 2300 °C |
| Yoğunluk | 3,2 g/cm ³ |
| Kitle Yoğunluğu | 0,75 – 1,82 g/cm ³ |

Packaging

25kg Kraft bags on pallet of 1 ton
